

I have been trying to connect to the Arduino through Microchip Studio but the arguments are not working. The path is correct as far as I can tell.

Arduino Uno Pinout - lookup ATmega328P pinout -Lookup

I got the program to build but it blink's really fast.

The program works fine in Arduino IDE and Tinkercad.

Notice the Asian script in the Output screen.

The program seemed to work fine after I corrected all my syntax errors.

This notebook is something new to me so I'm trying to jot down as much as I remember to. I will certainly try and keep it organized but that is an ongoing project throughout my life.
